## 1. INTRODUCTION

### 1. Project Overview

The **Jewel Inventory System** is a comprehensive software solution developed to streamline and manage the inventory and sales operations of jewellery stores and manufacturers. This system is designed to provide an efficient and user-friendly platform for tracking jewellery items, maintaining accurate inventory records,

and supporting seamless sales transactions. By automating key processes, the Jewel Inventory System enhances operational efficiency, reduces manual errors, and ensures better control over stock and customer management.

## 1. Purpose

The purpose of the **Jewel Inventory System** is to develop a computerized solution that simplifies the management of jewellery inventory and sales activities. The system is intended to replace traditional manual methods with an efficient and user-friendly application that ensures accurate record keeping, easy tracking of jewellery items, and smooth handling of sales transactions. By providing better control over stock and reducing human errors, the project aims to improve operational efficiency and support effective decision-making for jewellery businesses.

- **Created objects:** Jewel CustomerItem, Customer Order, Price, Billing.

The screenshot displays the Salesforce Setup interface for the 'Jewel Customer' object. The left-hand navigation pane lists various setup categories, with 'Details' currently selected. The main workspace, titled 'Details', is divided into two columns. The left column contains settings for the object's description, API name (Jewel\_Customer\_\_c), custom status (checked), display label (Jewel Customer), plural label (Jewel Customers), and field set. The right column shows settings for enabling reports (checked), tracking activities (checked), tracking field history (checked), deployment status (Deployed), and help settings (Standard Salesforce.com Help Window). At the top right of the main workspace, there are 'Edit' and 'Delete' buttons.

This screen shows the **Navigation Items setup** in Salesforce Lightning App, where you select and arrange objects (like Jewel Customers, Items, Orders, Reports, Dashboards) to be included in the app.

## FIELDS :

\*In Salesforce, **Fields** represent the data stored in object records, similar to columns in a database.\*They are of two types: **Standard Fields** (predefined like Created By, Owner, Last Modified) and **Custom Fields** (user-defined based on requirements).\*Fields make it easy to store, search, edit, and manage specific information for each object.

## Configured Fields And Relationships:

## Customer Order Fields And Relationships:

The screenshot shows the Salesforce Lightning App interface for the 'Customer Order' object. The left sidebar contains a navigation menu with options like 'Fields & Relationships', 'Page Layouts', 'Lightning Record Pages', 'Buttons, Links, and Actions', 'Compact Layouts', 'Field Sets', 'Object Labels', 'Record Types', 'Related Lookup Fields', 'Search Layouts', 'User Page Bottom Layouts', 'Business Rules', and 'Trigger Rules'. The main content area is titled 'Fields & Relationships' and displays a table of fields for the 'Customer Order' object. The table has columns for 'FIELD LABEL', 'FIELD NAME', 'DATA TYPE', 'CONTROLLING FIELD', and 'STATUS'. The fields listed are 'Created By', 'Customer', 'Customer Order ID', 'Item', 'Last Modified By', and 'Order Status'. Each field has a corresponding data type and a status indicator (a checkmark or a plus icon).

FIELD LABEL	FIELD NAME	DATA TYPE	CONTROLLING FIELD	STATUS

- Customer Orders
- Orders
- Settings
- Reports
- Dashboards

Go to **Setup** → **Object Manager** → **Item** → **Fields & Relationships** and open the **Priority** field.

### New Field Dependency

Create a dependent relationship that causes the values in a picklist or multi-select picklist to be dynamically filtered based on the value selected by the user in another field.

- The field that drives filtering is called the "controlling field." Standard and custom checkboxes and picklists with at least one and less than 100 values can be controlling fields.
- The field that has its values filtered is called the "dependent field." Custom picklists and multi-select picklists can be dependent fields.

**Step 1.** Select a controlling field and a dependent field. Click Continue when finished.

**Step 2.** On the following page, edit the filter rules that control the values that appear in the dependent field for each value in the controlling field.

Controlling Field:

Dependent Field:

Continue Cancel

**Create a new Field Dependency, selecting Priority as the controlling field and Expected Days of Return as the dependent field.**

USER ADOPTION :

\*User Adoption involves managing users effectively to ensure they utilize Salesforce efficiently.\*As an admin, you handle tasks like creating users, setting permissions, and configuring data access.

# TRIGGER :

\*A **trigger** is Apex code that runs automatically before or after events like insert, update, or delete.\*It helps automate processes and customize behavior when records change in Salesforce.\***Use case:** Update the *Paid Amount* on the *Billing* object based on the *Paying Amount* during insert and update actions.

Created a Trigger Handler class :

File • Edit • Debug • Test • Workspace • Help • < • >

UpdatePaidAmountTriggerHandler.apex

Code Coverage: None • API Version: 64

```
1 • public class UpdatePaidAmountTriggerHandler {
2
3 •     public static void handleBeforeInsert(List<Billing__c> newBillings) {
4
5 •         for (Billing__c billing : newBillings) {
6
7             billing.Paid_Amount__c = billing.Paying_Amount__c;
8
9         }
10
11     }
12

## **RECORD TYPES :**

\*Record Types in Salesforce group records of the same object to offer different page layouts, fields, and picklist values.\*They help tailor user experience based on different business processes within the same object.\*Use case: Create separate forms for Gold and Silver records to simplify data entry based on work mode.

	Item: Item Id	Customer Order: Customer Order Id
1	Item-01	Customer Order-01

## ADVANTAGES :

- Tracks metal type, weight, price, and quantity per item.
- Eliminates manual data entry errors
- Stores customer details and purchase history
- Helps managers make **data-driven decisions**
- Reduces mistakes using **Validation Rules** and **Field Dependencies**
- Customized Lightning Pages for easy data entry
- Reduces training time for new staff
- Easy to add new jewellery types, stores, or processes in future
- Uses Salesforce profiles and permission sets
- Ensures that only authorized users can view or modify sensitive data

## DIS ADVANTAGES :

- The app works only within Salesforce; integration with external platforms needs **custom APIs** or third-party tools.
- No support for scanning barcodes or using RFID for physical inventory checks.
- Needs improvement for complex inventory scenarios.
- Sales Order confirms but **actual payment collection is manual or outside the system**.
- New customer records are entered manually.
- All users may see the same dashboard view.
- Requires internet and Salesforce login.
- No offline access for stock audits or mobile order entries in remote areas.

## CONCLUSION :

The Jewellery CRM application effectively streamlines inventory and sales processes using Salesforce tools like flows, validation rules. It improves data accuracy, automates order management, and enhances customer communication. The system offers a user-friendly interface and real-time reporting for better decision-making. This project demonstrates strong practical knowledge of Salesforce development. While effective, future enhancements like payment integration and barcode scanning can further improve its functionality. Overall, it delivers a smart solution tailored for jewellery business needs.

● **JEWEL REPORT :**

### ADVANTAGES & DIS ADVANTAGES :

\*Reports in Salesforce help you view and analyze data in various formats like Tabular, Summary, Matrix, and Joined.\*They allow you to organize and share key insights for better decision-making.\*Use case: Create reports on Gold Items, Silver Items, Customer Orders, and Billings to give GoldSmith a clear business overview.

## THE LIGHTNING APP :

\*A **Lightning App** is a collection of objects, tabs, and tools grouped together in Salesforce for a specific purpose. \*It allows customization with logos, colors, utility bars, and Lightning page tabs. \*Users can easily switch between apps, improving navigation and efficiency.

### Created a Lightning App :

The screenshot displays the 'New Lightning App' configuration interface. The main heading is 'App Details & Branding'. Below this, there are two columns of input fields and options. The left column, titled 'App Details', contains fields for 'App Name' (filled with 'Jewellery Inventory System'), 'Developer Name' (filled with 'Jewellery Inventory System'), and 'Description' (filled with 'Elevate your look with elegance'). The right column, titled 'App Branding', includes an 'Image' field with a placeholder image of a jewelry store, a 'Primary Color Hex' field with a color picker and the value '#0070C0', and a 'Tag Theme Options' section with a checkbox labeled 'Use the app's image and color instead of the org's custom theme'. At the bottom right of the branding section is an 'App Launcher Preview' showing a small version of the app's interface. A progress bar at the bottom indicates the current step, and a 'Next' button is visible in the bottom right corner.

To create a **Lightning App**, go to **Setup** → **App Manager** → **New Lightning App**. Enter the app name, select a logo/color

**TABS :**    \*A **Tab** in Salesforce is a user interface used to create and view records of objects.    \*Tabs can be of different types such as **Custom, Web, Visualforce, Lightning Component**.    \*They help businesses access stored data easily, improve navigation, and enhance productivity.

### Created a Custom Tab :

create a **Customer Tab**, go to **Setup → Tabs → New (Custom Object Tab)**. Select the object **Jewel Customer**, choose a tab style, and proceed with default profile and app settings. Click **Save** to complete the tab creation.
